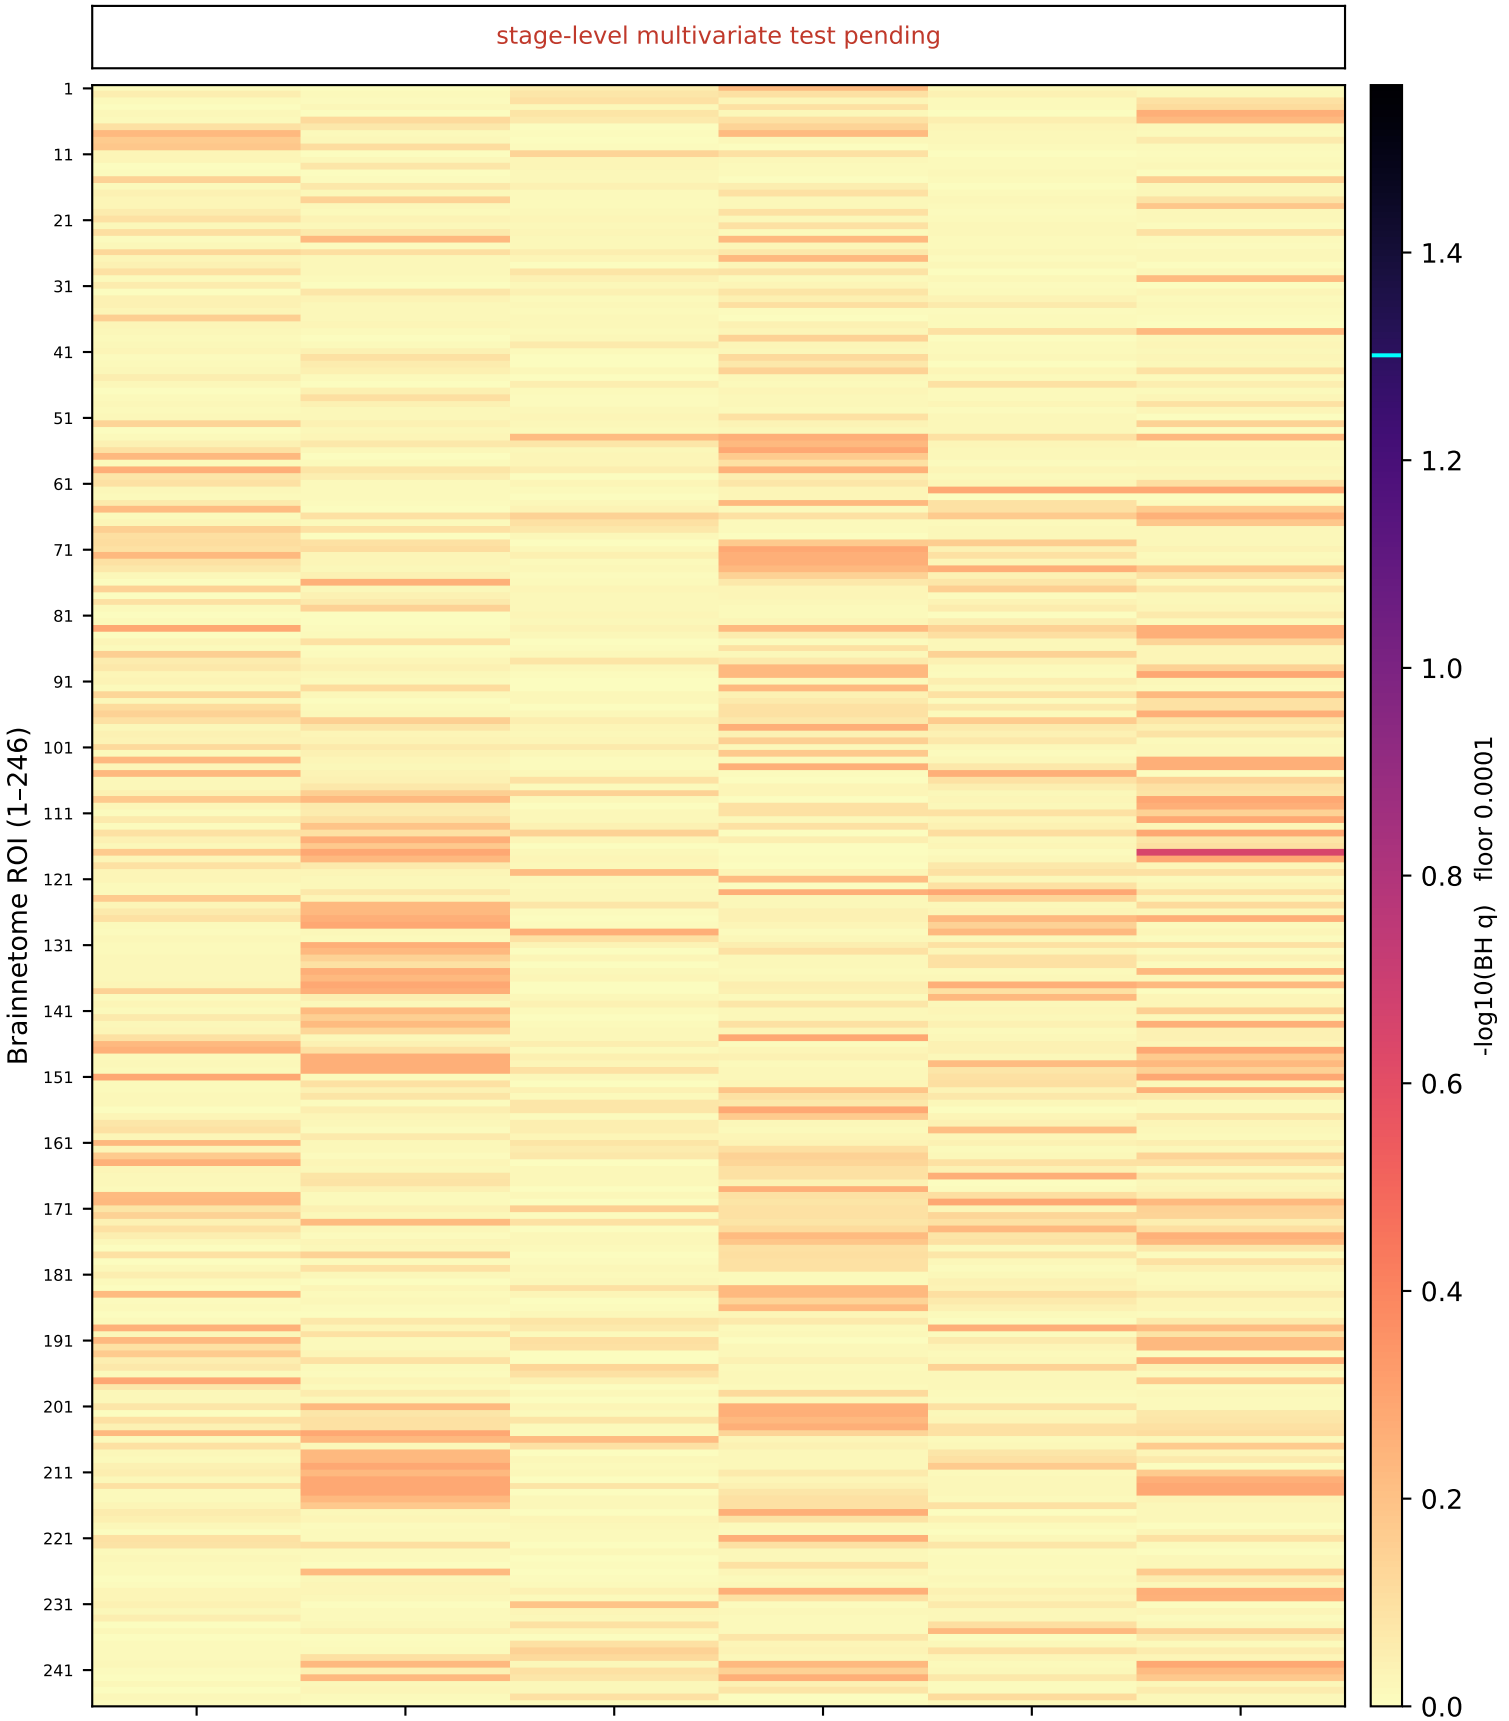
mALFF: ROI-level one-vs-rest significance
each stage vs the other five pooled



Mann-Whitney U, two-sided; BH FDR over 246×6 = 1476 tests for this biomarker.
Significant ROIs (q<0.05): 0. None pass correction. Colour is -log10(q); the top strip is a separate stage-level multivariate test, not an ROI p-value.
Exploratory: pooling the other five stages ignores the ordinal structure CN→AD.
