# Raw Uncorrected Significance (Exploratory) by ROI and Stage
# mReHo

| | CN | SMC | EMCI | MCI | LMCI | AD |
|---|---|---|---|---|---|---|
| stage-level multivariate | 0.210 | 0.719 | 0.006 | 0.092 | 0.579 | 0.022 |

-log10(p): 0 – 2

*^ permutation test on all 246 ROIs jointly -- NOT an ROI-specific p-value; different statistic and different colour scale*

**109 of 1476 ROI x stage cells marked at p < 0.05**

Two-sided Mann-Whitney U per ROI per stage; effect size Hedges' g (see csv/).
Values plotted are RAW p-values -- EXPLORATORY; the FDR-adjusted figure is the inferential one. Numerical floor 1e-12 applied before log10.
