Hierarchical Clustering of Regional DC_z Across Alzheimer's Disease Stages

Z-score across subjects within each ROI | input: DC_z (already z-scored across ROIs within acquisition)

subject clustering (unsupervised -- not clinical stage)

stage

Z-score of DC_z across subjects within ROI
(blue = below cohort mean, red = above; scale clipped at the 99th percentile of |Z| = 2.52)

Descriptive clustering only. A Z-score is a relative position within the cohort, not a statistical test: no claim of significance or progression is made here. For inference see the FDR-corrected ROI x stage figures.
